

FAST 308250 E92 Ignition coil Fact Sheet – www.efisupply.com

- Perfect electrical match to the FAST™ E6 CD Ignition
- Provides up to 70% more output than OEM coil
- Completely over-molded coil provides protection from rusting & corrosion
- Over-molded coil allows for an overall lighter unit

Provides A Matching Ignition Coil For The FAST™ E6 CD Ignition & Provides Superior Performance Over OEM Components

The FAST™ E92 E-Core Ignition Coil is the perfect solution for customers who currently run a FAST™ E6 CD Ignition or other modern ignition system. Designed to electrically match the FAST™ E6 CD Ignition, this coil provides a guaranteed perfect electrical match and ensures that both components deliver maximum performance. The FAST™ E92 E-Core Coil Ignition is able to provide up to 70% more output than standard OEM coils due to the computer-designed, robust gauge windings. This results in less resistance and better heat dissipation for improved higher RPM performance. The FAST™ E92 E-Core Ignition Coil is completely over-molded to ensure maximum protection from rusting and corrosion. The over-molded design also allows the unit to be significantly lighter than the standard OEM component.
