EASY LS Engine Swaps

No Complicated OE Harness or PCM Tuning.

FAST™ engineers have developed the simplest plug-and-play, self tuning engine control system on the market for the LS series of engines. The FAST™ EZ-EFI 2.0® LS Self Tuning Engine Control Kit is the easiest way to get your LS transplant up and running without all the complex PCM flashing and harness reworking required with the stock unit. This kit features all of the advantages of the award-winning EZ-EFI 2.0® system, plus it includes the EZ-LS™ Ignition Controller and uses stock or aftermarket LS injectors, sensors and coils. Each FAST™ EZ-EFI 2.0® system utilizes an easy-to-use interface through the included touch screen hand-held and doesn't require expertise, a laptop or tuning experience. After initial setup, the hand-held can be used as a digital dash with the included suction cup window mount. The EZ-EFI 2.0® system actually tunes itself as the user drives, and because it keeps tuning, future engine upgrades are a breeze, meaning that expensive trips to the shop for simple tuning issues are a thing of the past. A purpose-built, OEM-quality wiring harness is included in the kit as well. It features a clean, mesh wrapping that dramatically improves engine aesthetics over the factory harness. And with the included FAST™ EZ-LS™ Ignition Controller, the user can easily get running or has the option to adjust timing. This multi-port installation kit is compatible with all LS-based car and truck engines and is designed and engineered by FAST™. The EZ-EFI 2.0® LS Self Tuning Engine Control Kit is made in the USA, features a limited lifetime warranty and is backed by the industry's most extensive technical support team. Requires fuel system to be purchased separately.

Touchscreen Hand-Held

Replaces Tachometer & Most Gauges.

- Uses OEM LS sensors, coil-per-cylinder ignition & injectors
- Modern, mesh-wrapped wiring harness replaces ugly, complicated stock harness
- Self tuning EZ-EFI™ gets you up & running quick & EZ - No laptop or tuning knowledge necessary
- EZ-LS™ Ignition Controller offers no tuning quick setup option as well as custom tuning via hand-held
- Limited Lifetime Warranty & backed by industry's most extensive tech support team
- Displays up to 20 live data readings/sensors; Even all at once if desired
- 100% designed & engineered in house by FAST™ staff
- Start-up gauge screen is user selectable

GM LS EZ-EFI 2.0™ Touchscreen Readings:

IAC	Load
RPM	Fuel PSI

TPS %	Total Timing
A/F Ratio	O2 Correction %
Coolant Temp	Injector Duty Cycle
Battery Voltage	Fuel Pump Duty Cycle
Target A/F Ratio	Vacuum Advance
Base Timing	TPS Voltage
Air Temp	Idle Advance
MAP	Lb.Hr.
