

HOLLEY EFI CAM SYNC SYSTEMS

Big Block Chevy w/ standard cam height; For external, dry timing-belt, cam drive systems

PART# 556-114

Specifically designed for use w/ JESEL and similar external, dry timing-belt, cam drive systems.

Includes 3 wire hall-effect sensor (8-20 volts), anodized billet aluminum bracket, mounting hardware, mating connector, and stainless steel 1/4"-20 "flying magnet" screw w/ high-temp, rare-earth magnet.

Features:

- *Fits Big Block Chevy engines w/ JESEL and similar external, dry timing-belt, cam drive systems*
- *Includes 3 wire hall-effect sensor (8-20 volts), anodized billet aluminum bracket, mounting hardware, mating connector, and stainless steel ¼"-20 "flying magnet" screw w/ high-temp, rare-earth magnet*
- *Unique t-nut and bracket design allows for complete sensor adjustment from the outside of the bracket with a single jam nut*
- *Designed to provide a plug-&-play cam position signal to Holley EFI systems; Also compatible with any EFI system which can read a digital, square-wave cam input signal*
- *Bracket assembly can be mounted in up to five locations to accommodate various cam-drive systems and front accessory drive configurations*
